

# Protector™

Congratulations on your purchase of Protector: Special Edition! This cartridge contains several powerful features, including JagFree CD™ and BIL.

To use JagFree CD, simply insert a JagFree CD compatible compact disc into your Jaguar CD unit and insert your Protector: Special Edition cartridge into the cartridge slot. Turn on the power, and the JagFree CD will automatically boot. Most CDs should boot in 60 seconds or less, if for any reason a CD does not boot after that time, simply power off and on the Jaguar unit. If the CD still does not boot, then it is possible the Jaguar CD unit needs maintenance, or that the CD is improperly formatted or possibly damaged.

To use BIL, you will need a special interface cable (not included) to connect to a personal computer. Insert your Protector: Special Edition cartridge into the cartridge slot, hold the 4 or 8 key on your Jaguar joystick to boot 4-bit or 8-bit mode, respectively, and turn on the power. You should immediately see the BIL loader screen. You cannot exit this screen except by powering off the Jaguar. The 4-bit BIL mode may also be accessed by the Protector options menu.

This release would not have been possible without the dedicated, tireless efforts of several individuals, including Scott Walters and Glenn Bruner and many other Jaguar fans. Special thanks to all who helped test both JagFree CD and Protector: Special Edition to make this one of the best Jaguar releases ever!
